

» Explore the impact of space on your behaviour.

You want to reinvent your space so that it supports the experience you want to create.

SPACE ANALYSIS (15 min)

1. Describe the situation and/or constraint associated with the current use of the space. What activity/behavior should be supported by the space?
2. Define two mandatory criteria that are prerequisites for your activity/behavior and insert them into the parameter fields of the decision matrix. Then, fill out the decision matrix by sorting your available areas (in one or several spaces) in your surroundings – even temporary ones – into the given fields.

3. Select the field with the highest potential of both parameters. Describe the features and structure of your selected space and the missing ones that are needed to support your activity/ behavior.

SPACE REDESIGN (30 min)

4. As a Creative Starter, look for analogous spaces or areas that could inspire your space redesign.
5. Brainstorm solutions using the analogous fields as inspiration:
6. And action! Change your space. Take a before and after picture and insert them here.
